

Project: RENOVATION ON-SITE
Title: ROYAL HOTEL - LEBANON
Date: 2003 - 2004

Clear Shield products provided protection from pollution, finger marks and oily substances.

The work done onsite was divided into two stages: renovation and protection. Those two stages were applied on 283 linear meters of stainless steel, and on 1400 m2 of glass. The renovation process was done in order to renovate stained and discolored surfaces, using the Riteprep and the Stain remover. The protection process was done with the Rite Coat 2200 for the stainless steel, and with Clear Shield for the glass.

The work being done, the results were unexpected: the glass now promises clarity, visibility and cleanliness. Instead of cleaning the stainless steel once per week and the glass every day, they both became easier to clean, stay cleaner for longer, and resist staining and discoloration.

Combining luxury and elegance, Royal Hotel is located on one of the worlds most beautiful seashores. Facing the Dbayeh marina at the north of Beirut, the hotel offers all relaxation features for both business travellers and families looking for leisure.

Being a modern luxurious hotel with glass facades, glass cleanliness is a must. In addition to this, the hotel is not far from the highway and the seashore, thus is it exposed to traffic pollution and sea salt spray. But cleanliness problem was resolved with CLEAR SHIELD Glass Tech.
