

**PROJECT: PROTECTION ALONG WITH THE CONSTRUCTION**  
**Title: CAR SHOWROOM - LEBANON**  
**Date: 2006**

While heading to the South of Lebanon, driving along the beautiful coast of the Mediterranean Sea, you'll reach Saida, or Sidon, where this car showroom is located.

During the construction stage, ClearShield products were directly applied onsite on 600sqm of glass, in order to avoid any cleaning problems long after the construction being done. Applying ClearShield products on the glass protected it from any damage caused by

the construction materials, the atmospheric pollution and many other contaminants. This system also modified the glass characteristics; it became resisting to staining and discoloration, improving its visibility and safety.

Once the treatment was done, the glass became easier to clean and to keep clean: it now requires cleaning less than half as ordinary glass. Also the cleaning costs less, and the glass always keep looking like new.
